7. Droid in place of Ipod

Yahoo group: droidhams
Date: 2010-04-10 23:02:48 UTC
From: Tom H
Topic: 7 Message: 7

I discovered today that using my droid in place of my ipod going to a stereo with the same cable works fine. I am able to play my music as if it was an ipod while riding my motorcycle.I need to test it out while using the phone with 4 speakers I use for my stereo.

I cannot wait for long ride to use this neat setup

From: Matthew
Topic: 7 Message: 8

Tom I replaced my iPod with my droid. I have all my audio rss feeds on it, plus I get to listen to them with out an extra device on my belt! It great and I love it. I am using Google listen for rss feeds and Droid live for my streaming feeds (shout cast) both light versions are free. Here are a few of my Ham Radio feeds that I listen too.

Enjoy:

http://www.soldersmoke.com/soldersmoke.rss Solder Smoke Podcast

http://www.twiar.org/twiarpodcast.xml This Week In Amateur Radio

http://www.amsatnet.com/podcast.xml Huston AMSAT Net

http://n5pre.podomatic.com/rss2.xml Amateur Radio Newsline

Oh works better then my iPod, when one is done it continues to the next one in my queue! No more fiddling with my iPod when mowing the yard and when I call come through, it pauses and then returns when the call is done!

Hope this helps. If your viewing this on your droid, all you need to do is make sure you have Google listen installed first. Then go back to this email and click on the links. Select subscribe and you're done. Do this for each link.

A check yesterday says it is being developed with no release date as of yet. 5-8-2010

15. droid on my motorcycle

Yahoo group: droidhams
Date: 2010-05-08 22:56:59 UTC
From: Tom H
Topic: 15 Message: 15

I recently tried using the droid in place of my Ipod with a stereo with an Ipod input on it.Its very disappointing compared to either the Ipod or off air stereo reception. It seems to be sewer for picking up noises via a so called shielded USB cable to 12 volts.I guess its either back to the Ipod or just listening tunes off air.

>
Sounds just like when it's hooked up to the charger in the car. Picks up all kinds of crackles, and static. I bump the media volume down a notch or two and that takes most of the noise out. When it's not hooked up to the charger the noise is gone on mine, probly the same for you.

I think the same Bob yes but going through the amp in the stereo would not let you solve the issue by simply lowering the volume.
The problem I am sure is still there in your case too it is just that you do not hear it without the volume or the amp I am introducing into the scenario

From: GregCT
Topic: 23 Message: 23

Found this one this morning, good reviews and seems to work well during the limited testing I've done so far...

http://android.spieglhof-media.de/qthlocator/

I'm posting the link because it is a paid app, although after currency conversion is only $1.86, so no big deal and well worth it

24. New Android Tool that bears investigating...

Yahoo group: droidhams
Date: 2010-07-12 09:53:08 UTC
From: GregCT
Topic: 24 Message: 24

Hey all,
Been seeing this mentioned in a couple of different blogs I follow and figured it would be worth a post here. Alot of discussion about the lack of Ham Specific apps out there along the way, too, so this might help rectify that complaint.

http://appinventor.googlelabs.com/about/

I'm going thru the process of getting access now, hope to play around with it and possibly come up with a simple logging program that I will share if/when its operational. My goal is to come up with a VHF Contesting log that will output directly to Cabrillo format for log submission and auto-fill grid info from GPS... we'll see how lofty a goal that is... hi hi

73, try it, share your results and enjoy,
Greg

I apologize if I've reposted something that you've already called attention to. However, I really didn't see anything here that included the fact that K1RFD has the Bare Bones Echolink app up and running and that Beta tests will hopefully be sometime this summer. That info is in the K1RFD QRZ posting on 6-26-2010. Sorry...

I apologize if I've reposted something that you've already called attention to. However, I really didn't see anything here that included the fact that K1RFD has the Bare Bones Echolink app up and running and that Beta tests will hopefully be sometime this summer. That info is in the K1RFD QRZ posting on 6-26-2010. Sorry...

32. Awaiting Echolink, APRS, and DX Cluster

Yahoo group: droidhams
Date: 2010-07-30 12:44:41 UTC
From: Jeffrey
Topic: 32 Message: 32

Well, have a 32 gig IPod Touch here that I use and run Echolink, DX Cluster, and APRS on. However, when I bought my Droid X I looked so forward to finally getting all this on my phone so that I don't have to be in a constant WI-FI area to utilize them. Well, of course I don't see them on the Android market yet but sure looking forward to their arrival!! I know a few people are talking about Echolink on here but what about APRS or DX Cluster stuff?? Anyone into these features also?

Look up APRSDroid on Google, for some reason its not listed in the market but you can download the apk and install it that way. I use it regularly (W6UDF-14). It only transmits location but won't receive locations.

Jeff:

While there are differences in quality and speed of various memory cards (e.g., I try to buy Class 4 or 6 cards for my family's camcorder and cameras), there is nothing special about what Verizon sells. I would certainly not spend $130 on a memory card!

Echolink/K1RFD has a beta version that is testing right now it will be on the market very soon. There are some polishes to do yet. Some foreclosing and other minor issues but it will be ready very soon. Some are testing it now as of late last night so if you see them on help with the test. Mine is Node # 196218 (KB3AWQ) if you see me on but it will be later in the day and overnights when I will be on as I am a 3rd shifter.

A beta version is being tested now. Seems to work with a few minor bugs that he is working on. He sent out some invites via a google group Sunday night to test it. The group is http://groups.google.com/group/echolink-android?hl=en but Jonathan will have to approve your membership to the google group. Not sure how many testers he wants as too many can be a cluster which may be why he sent it out to a select few

I am looking for some APRS Software to install on my HTC Tattoo.

The only piece of software i have found that would do this is APRS Droid however this is not available in Android Market.

I have downloaded the file from the website however it comes down as a zip file and when i extract the file it extracts to into 2 folders and a few individual files.

I'm currently unsure of how i actually go about installing this onto the phone and the information i have so far found online has been totally unhelpfull.

Therefore any help with installing this would be greatly appreciated.

Couple of things to try... one, he may have uploaded as a zip file because the websites uploader didn't recognize the .apk format, so you could try renaming the file "filename.apk" and remove the .zip. Then, the app manager should be able to install it from the sd card.

If that doesnt work, perhaps renaming the file as "Update.zip", transfer to the root directory of the sdcard, not into any other subfolder, and then install from the boot recovery as an update. Not the safest way to travel, anytime anything is done from the boot recovery is not pretty and has inherent problems.

Either way, before you try anything that might end up 'bricking' the phone, it may be best to try to contact the developer and get his feedback on your particular phone model/Android version...

You're looking for the .apk file... find that and copy it down to the droid, then run it. It'll install and do the rest.

I wouldn't worry about anything (at all!) in zip format... it's just too easy to get something you don't need.

I just went to aprsdroid.org from my phone and did it all from there. ===> http://aprsdroid.org/download/

I went straight to the download section on their website and selected the recent build. Downloaded and installed straight to my phone without issues.

On a side note, thanks for the heads up as I didn't even know this application existed for Android.

Running HTC Hero on Sprint, Build 2.27.651.5 Rooted.

When searching, it will only find someone if they or the link or Repeater are online. If you add to favorites while they are online they will show up on or offline in favorites. You can search by callsign and location also.

I just installed aprsdroid. I did it a little differently. I found that aprsdroid could be downloaded from Slide-Me, (SAM3.5), which is a market for apps like Market or AppBrain is. After I installed SAM3.5, I installed aprsdroid from that app. By doing that it should be an easy install for any updates. My problem is I am new to APRS and don't know how to set it up. Do you just take all of the defaults in the set up. Where did you get your passcode. For SSID I think I will use 10:APRS-IS(no radio). What do I use for APRS symbol, the default is /$, what does that give me for a symbol. What do you use for your status message, the default is http://aprsdroid.org/ , is this OK? What should I use for connection protocol, UDP(port 8080) or HTTP POSt(url)? What server do you use, is the default srvr.aprs-is.net OK?

58. Echolink for Android connection conundrum

Yahoo group: droidhams
Date: 2010-08-30 16:03:11 UTC
From: k1jy
Topic: 58 Message: 58

Has anyone else seen this ...

Using a HTC Incredible with Echolink for Android, connections to individual stations frequently time out (not a routing error, a time-out error).

It ALWAYS happens when connecting from Android to my Repeater station, K1JY-R. (The K1JY-R log shows many stations are able to connect.)

It happens with Network Connection set to Direct (Verizon network, not WiFi), Relay, or Public Proxy. I haven't analyzed the symptoms when using WiFi.

Connections to conference servers always go through immediately.

If I go to my Repeater station, and connect to the Android handset, it connects nearly instantly. THEN if I connect from the Android to the Repeater station, it connects nearly instantly. If I come back later, I get a time out error.

So it must an Echolink routing error. Any thoughts? Thanks.

Thanks, Lindsay, K1JY

I just configured mine, and my wife's with no problems.

I generated my APRS-IS passcode, entered our call signs in, picked "10"
for APRS-IS (to keep it separate from the car, the truck, the Scout, the
Nokia N810, etc).

I had to set up an APRS-IS server, and a few other parameters.

But most importantly, I had to turn on the GPS on the Droid2 so it could
get a fix for my position.

When working, it does two things.

1) it sends out my position and I show up on findu or aprs.fi.
2) it shows "packets" coming into the APRS-IS that are "near" (defined by
me as X kilometers) me.

I was able to watch as the local repeaters were announcing themselves over
APRS - the packets shows up on the aprsDROID "console"

I have a Droid Incredible/Verizon.. I can send one shot positions fine via all methods (tcp/udp/http). However, I cannot connect with TCP and receive local APRS events as you describe. Did you change to a different server from the default? I wasn't sure if I should try one of the aprs2 servers on port 14580, or what exactly.

Dan,

Mine works well also. But Tom made me aware of V 0.7 which RECEIVES and DISPLAYS data. I was still on V 0.6. Since APRSdroid is not in the Marketplace, it is not automatically Updated. You must go to their website and download it and check the box ALLOW non-Marketplace download.

I just configured mine, and my wife's with no problems.

I generated my APRS-IS passcode, entered our call signs in, picked "10" for APRS-IS (to keep it separate from the car, the truck, the Scout, the Nokia N810, etc).

I had to set up an APRS-IS server, and a few other parameters.

But most importantly, I had to turn on the GPS on the Droid2 so it could get a fix for my position.

When working, it does two things.

1) it sends out my position and I show up on findu or aprs.fi.
2) it shows "packets" coming into the APRS-IS that are "near" (defined by me as X kilometers) me.

I was able to watch as the local repeaters were announcing themselves over APRS - the packets shows up on the aprsDROID "console"

Could you check my setup to see if there are errors. I seem to get a return from the server 'first.aprs.net' . I chose UDP port 8080 as it seems the http post gives a port error. Any suggestions on which is better and what syntax to use if the http/port is used? Do I need http to get returns (probable answer is yes?). If so how would the http be listed as above? Using symbol %/ . Is this correct?
Thanks in advance for any help. I feel I am very close to success. BTW using V0.61

Dan,

UDP port 8080
srvr.aprs-is.net

Mine works with "Use network location" as well as with GPS on. Of course the location is off a mile or two and wanders between cell towers even though I am at home and not moving much.

I'm using northwest.aprs2.net, which is the aprs2 server for the Pacific Northwest, and in my case, includes Montana.

I'm also using the TCP connection and version 0.7.

I get "neighbor" updates.

Perhaps because I'm using the regional server? On my other APRS-IS applications I'm able to designate WHICH port number I want to use, so I could choose to use the regular APRS-IS port, or the Montana-only port, or the user-defined-filter and so on, but APRSdroid doesn't allow me that level of sophistication at this time.

You can go to this URL to get one. http://aprsdroid.org/passcode/ I finally found the link at http://github.com/ge0rg/aprsdroid/wiki/settings

The last link also has info about setting up the program. To bad there isn't a help text with the program.

Those are both great apps. I put both of them on my "Ham Desktop" as shortcuts to bookmarks...so it is a one button push to see the cluster. I like the iPhone visual format better. Seems to be more readable without my reading glasses. Just wish I could have US or NA Originated Spots only, like I can on the clusters setting filters for K, VE.

Jeremy,

I have not seen any DXCluster apps, but try these links in your browser. They work well on my Android phone.
The spots will automatically update in the browser.

http://www.gb7mbc.net/webcluster/iPhone.php
http://www.dxfuncluster.com/iPhonecluster/

Great webpages may be what I go with. Have looked at maybe just writing an app but I have no experience with developing apps for droid yet but may look into it.

Good afternoon,

I would poise a general question about the phone directory on my new phone, and I don't think this would be the place to ask. However, if it OK, and someone says so, then I will submit it. But can someone point me to a good droid forum that deals with the general public and general questions? I have the new Samsung Galaxy T-Mobile phone.

Thanks
Fred-N4CLA

Checking the AndroLib for new Android Apps, I only find:

CW Trainer Light
Echolink Finder

I have SMS2CW, Echolink, HamSatDroid, Call Log, APRSDroid, GB7MBC Cluster and many more.

If you search the market for "ham radio" and "amateur radio", i think most things will turn up.

I use:

APRSDroid
APRS Viewer
QTH Locator
EchoLink
HamSatDroid
Scanner Radio (not really ham, but has some repeaters)
EchLink Finder
IRLP Finder
Signals (again not ham, but contains some useful ham stuff)
Morse Trainer
Ham Radio Study
PalmVE
Call Log
NCDXF Beacons
NKCCluster

HTH

Doesn't appear to be yet, However I know there is probably someone working on one....

Others I have found free and $$

Ham Radio $$
QTH Locator-Free & $$
Ham Exam-$$
Ham Log-$$
Grid Locator Free & $$
M3YQ Repeater Range (GB only)- Free
Morse Trainer-$$
Morse trainer Lite-Free
HF Beacon-Free
International code of signals-Free
Ham-Free
Amateur Radio call sign log-Free
Afu Trainerdroid (German license study)- Free
Amateur Radio Callsign Database-Free
Ham Radio Study-Free
DroidSat-Free
Morsecode/Morsecode lite-Free & $$
Morse Ring-Free

Others that could be used for Amateur Radio for remote station control:
AndroidVNC-Free
Remote VNC Pro-Free
Skype-Free

Other Ham/Electronics related:

Hertz-Free
Ohms-Free
SpectralView-Free
Tricorder-Free
UTC Time-Free

Of course there are plenty of Scanner Apps....

sorry if I duped a few from the other list...

The Adcoc library is not fully developed the normal Androd user. HSMM give use hams OLSR http://www.olsr.org/

this Is a call to any and all developers interested in, porting the HSMM capability in to the android OS.

A pocket sized HSMM-Node with 3g or 4g connections and GPS.

The App would need to function in the same sort of way APRS dose on the phone. radio Timing control and 5min SSid broadcast bust intervals.

Please check out the link below for more background...

Lets DO THIS!

http://hsmm-mesh.org/download/firmware/index.html

WHY? It would be a better resource to port it to other WRT supported devices. Right now, why would you want to tie up your phone or tablet for a mesh. Thats not an end user application, but an infrastructure one.

HSMM is all ready ported to WRT.

I would tie my phone up as a tether to the Internet to give all the Mesh nodes around in the area a link to the Internet. Just the other day a good portion of the city im in, lost power for the better part of the day, and as usual my router was on... but the cable modem is not able to get signal when the main power drops out. I did have my HT and my phone w/ a distance but stable evdo Internet connection.

Here's HSMM, take my phone switch it over and BAM! Phone<~~>OpenWRTrouther w/ HSMM<~~>Next closest OpenWRTrouther w/ HSMM. and so on with the next link to a node.

WRT's have about 1/2 the CPU speed as my phone. The program should load like a tether app. Radio should sit standby when its not transmitting its SSID/ or other data packets, similar timing like droidAPRS. A user key to keep it available only to a HAM. Now Part 15 no longer applies part 97 applies. http://www.qsl.net/kb9mwr/projects/wireless/modify.html Modifications to radio software has been encouraged. The LAW Backs us up! http://www.fcc.gov/ftp/Bureaus/Engineering_Technology/News_Releases/2000/nret0015.html

What sort of Android Phone do you have? Ive been rooting G1's and my EVO 4g, Ive not seen the functional ability of radio control. Would a modified ROM needed.

All and interested developers Please Check In.

112. Can not download Android Ham Apps

Yahoo group: droidhams
Date: 2011-01-31 15:22:41 UTC
From: alexloopantenna
Topic: 112 Message: 112

Good morning.

I am PY1AHD ALEX (www.alexloop.com)

I am trying to make my 7 inches tablet devoted to ham apps.

I have already Echolink amd Hamsatdroid.

I have downloaded a QR barcodescanner but doesnt work on it.

I need the standard links.

I would like to Download this programs:

Anybody can help me?

www.androidzoom.com/android_applications/tools/ham_qa.html

www.androidzoom.com/android_applications/tools/amateur-radio-call-log_iyhz.html

www.androidzoom.com/android_applications/communication/gridlocator-donation_kahu.html

www.androidzoom.com/android_applications/books_and_reference/signals_fbjn.html

Hello Alex,
If you click on the links you provided, it will take you to a page outlining the app. If you then take the app's name, and drop it into the market under search, it should locate the application. You can then download it directly from the market.

Better yet, try Appbrain!
www.appbrain.com
This lets you browse the apps, create a list of what you want, and then press the Go button on your phone. All selected apps will then be installed. Look for keyword "ham" and you will find a list of ham apps, just click the INSTALL button, (all from the web on your PC), on each one you want. After that start the appbrain application on your phone. It will download everything you selected and install it. You can also deinstall apps with appbrain. It is truly one of the slickest things I have found for the android...

Hi Dave,

I can reach the Appbrain links but when I try to downloadn apperas
a message on line on the righrt side asking to a syncronization program on
my Android phone.

When I try to donwload the Appbrain software appears a ERROR message 404.

The Echolink and Hamsoftrdroid gets inside my 7 inches generic tablet with
the pure link:
http//www. etc... etc...

I have downloaded the Barcode Scanner and there is a red line, I put the
tablet in front of the
QR code and nothing.

There is any image that I can see on the tablet screen during scanning? I
suppose the camera must
be active but I dont see nothing.

Thankyou very much.

Hi Alex, I have to ask this.. is this one of those Chinese tablets and the reason you need url links to download is you're having problems with the Android Market? If so I know how to fix your problem because all these cheap Chinese tablets have the same issue with using a temp test id.

http://www.slatedroid.com/wiki/index.php?title=Fix_Market_For_Slates

I did this to fix mine so it should work for you.

Topic: 112 Message: 116

Hi Ron,

Thank you very much for your help

The tablet unit is this Chinese one:

http://www.focalprice.com/detail_CE012B.html

I am a very basic computer user, so I will open this e-mail link that you
gave on my chinese tablet,
and open itn and then it will auto install?

Any other recomendations?

I have the App Market instaled by the manufacturer and open nornally. I need
the Appbrain to download
most of Ham Android Softwares.

Another question
I have downloaded the Barcode Scanner and there is a red line, I put the
tablet in front of the QR code and nothing.

There is any image that I can see on the tablet screen during scanning?

I suppose the camera must be active but I d'ont see nothing.

I am sorry for this quantity of questions, I am very pleased for the group
help but a good notice
is that you are acumulating credits to use in Magnetic Loop antennas
questions *:))*

From: ac2rf
Topic: 112 Message: 117

Sadly the fix isn't a one click install. That link I gave you is a wiki page detailing the steps you have to go through to fix the problem which entitles copying a working id from a phone or creating a new one with the software development kit and editing the system files with the new id. This is the only known way to fix the issue.

The only alternative is to use an alternative market place app and hope they have the same apps.

As for the Barcode Scanner I think it has to do with the hardware. The camera on the tablet may or may not have the ability to adjust the focus which is required by the app to be able to read the QR code correctly.

OK Ron,

There are many steps to follow on the link that
needs computers knowledge.

My question now is:

I would like to have a short cut for the programs
without passing trough Appbrain ou Appmarket, do it would be easier
to install (I d'ont know if it is possible).

Thank you very much.

PY1AHD ALEX

119. HTC Thunderbolt 4G

Yahoo group: droidhams
Date: 2011-02-25 23:45:50 UTC
From: w4yx_bill
Topic: 119 Message: 119

I plan to acquire a 4G HTC Thunderbolt as soon as Verizon releases that phone to the market. Besides Echolink and the APRS application, what other ham apps exist for the droid? Is there a particular place to find these apps for download?

tnx and 73,

Bill

Hi,

I am Alex PY1AHD form Rio de Janeiro Brasil , I have a generic chinese 7 inches Android Tablet

My tablet have installed Android version 1.62.

I have downloaded Bar Code Scanner but id does not work on my tablet.

I have only Echolink and HamsatDroid installed.

I supose that my IP is blocking all other Amateur Radio Apps

Anybody on this group can help me in giving the final shortcut for the developers link for Ham softwares?.

In other words, I can not download from Apps stores.

Hi Alex
This is my list of Android ham/comms apps.
I'm using an HTC Desire on OS 2.2

Here is a list from an android forum

APRSDroid
APRS Viewer
EchoLink
HamSatDroid
Scanner Radio (not really ham, but has some repeaters)
EchLink Finder
IRLP Finder
Signals (again not ham, but contains some useful ham stuff)
Morse Trainer
Ham Radio Study
PalmVE
Call Log
NCDXF Beacons
NKCCluster (G3NKC?)
Ham Radio
QTH Locator
Ham Exam
Ham Log
Grid Locator Free
M3YQ Repeater Range (GB only)
Morse Trainer
Morse trainer Lite
HF Beacon
International code of signals
Ham
Amateur Radio call sign log
Afu Trainerdroid (German license study)
Amateur Radio Callsign Database
Ham Radio Study
DroidSat
Morsecode/Morsecode lite
Morse Ring

Others that could be used for Amateur Radio for remote station control:
AndroidVNC
Remote VNC Pro
Skype

Other Ham/Electronics related:

Hertz
Ohms
SpectralView
Tricorder
UTC Time

OK,

Returning to my previous e-mail

Hi,

1) I have a generic chinese 7 inches Android Tablet

2) My tablet have installed Android version 1.62.

3) I can not download from Apps stores.

4) I supose that my IP is blocking all other Amateur Radio Apps

5) Anybody on this group can help me in giving the final shortcut for the developers link for Ham softwares?.
Thank you very muvh.

Alex

Most if not all of the apps I posted are on the 'Market' website, not the Apple one. If you google any of them there are other links (some QR coded for easier download) from other websites. I'm surprised that your tablet is still on Android 1.62 or 1.7 as I think you may need at least 2.0. Others on this group may know different. I don't have them all installed, but as a telecoms engineer and radio amateur, I do use:

HAM - good for when I go portable and need my maidenhead/QRA square; lat/long etc
Antennas - good for when I want to know the position of the radio mast my phone is connected to
(also there is one called *OpenSignal*). Still really in Beta form. The website is useful even if the software crashed my Desire.
http://opensignalmaps.com/

Beacon - tells you which beacon is transmitting on what frequency and when at any one time.

Point is a clever app. Nicely presented compass.

*CrowsFlight *Good for storing waypoints and distances to and from each other.

QRZ - there are variations on the callsign lookup, but they don't all have

*DX Cluster - *live spot DX

*HamLog - *Logging app, but I'm using the one on QRZ.com itself now.

TuneIn Radio - good for internet radio stations.

*Echolink - *I think Echolink is a bit passe these days, but some still use it.

Skype for Droid is great, but watch the outgoing volume levels from your phone.

If you click on the 'Market' link on your Android, all the above are there I think.

Topic: 122 Message: 126

Hi Jerry,

Thats the point, the Market link on my tablet is very limited, there are no Ham Radio
apps. available for download.

I have googled plenty of Ham Radio aplications on other stores, but there is something that is blocking
que download.

I have done almost everything with no results.

The only two aplications that I could download was HamSatdroid and Echolink.

HamSatdoid was downloaded from the AMSAT website link.

And the Echolink was downloaded from a link informed by the own Echolink developer.

Thank you very much Jerry

By the way, I am a basic computer user.

127. droidsat app problem

Yahoo group: droidhams
Date: 2011-02-28 04:16:13 UTC
From: Tom
Topic: 127 Message: 127

Anyone using the droidsat app for satellite predictions? Both N1JEZ and I have the same problem so wondering if anyone here might have a solution.

From the main display of droidsat, if the "down arrowhead" to the right of the satellite name is pressed, a list of available satellites should display. Instead, we get a list which appears to be blank (all white). The list is populated OK because touching an area of the list brings up a different satellite display. It's as if the text and background colors are both set to white. I've changed text and background colors with same results. Anyone else have this problem. Or possibly a solution?

Thanks.

Tom - KØTW

Hi,
I have a samsung SGH-T456 phone.
I am having trouble opening web pages in an effort to download echolink.
One site that i was able to open, i didnt see the download link.
I used my laptop to view the page and the download link was visible.
I am a rookie at this so any help would be appreciated.
Thank you
Lewis

Hi,
Thats right. I just tried to download version 1.1.3 from andappstore and I got" not supported content" message.
This link was the first one that I could actually see (and click) on the phone.
Thanks
Lewis

I don't think your phone is an Android operating system phone, so I don't believe that the echolink program will work with your phone. It looks like it is a Samsung Feature Phone, not a Samsung Android (for example a Samsung Galaxy S). It would be like trying to run an Apple program on a PC.

So Ronald , it seems that the browser in this phone is outdated according to Samsung
and that is why (at least in part) why some pages will not open and probably why echolink
will not work.
What really gets me is how a browser can become outdated and cannot be over written
according
to the folks at the local Samsung dealer.
Thanks for the input.
Regards
Lewis

142. Re: [droidhams] Re: Great APRS app U2APRS

Yahoo group: droidhams
Date: 2011-03-18 16:28:52 UTC
From: Chris Seright
Topic: 138 Message: 142

I like the application, and it seems to be running well for me. However, unless there is a setting that I am unaware of, the application will not run in the background. When I navigate away from the app to my browser, or desktop, or whatever, the application closes. Is anyone else experiencing this problem?

I'm having the same issue on on my Driod1. I emailed the developer (JA7UDE) to thank him for the app and report it wouldn't run in the background on my phone. But after looking up his email address on QRZ.com, I discovered he is just North of Fukushima Japan. I made no mention of any issues with the app, I thanked him for the app and said I was praying for him and his family. He responded saying he is just 7km from where the tsunami hit and he is okay.

Backspace (DEL) in the field box to delete the extraneous default characters. Then hold your finger down on the box to activate the on screen keyboard entry and type in your password. Same thing for the Server address (TCP).

From: mathisono
Topic: 159 Message: 159

Im have an htc evo rooted with vaelpak3, it doesn't make a difference what ROM...BUT.. Im working on a websdr-core controlling a soft-rock ensemble 2, W/ a http interface. So... The websdr.org pages don't function on my phones web browser! How much trouble is it to make the java compatible with android? Would some one, Please!, with java web code experience tackle this question! It would be nice to control the SDR-core from a computer's browser but also from an android's browser. Or is the other option to wright core control into an application?

160. Repeater Finder (RFinder)

Yahoo group: droidhams
Date: 2011-04-07 23:20:47 UTC
From: ke5zrt
Topic: 160 Message: 160

This is an awesome new application for Droid hams! I have not tried it yet, but I am downloading it now and I will report its functionality soon. The application costs $5.00, but if it works, it is worth every dime.

https://market.android.com/details?id=com.w2cyk.android.rfinder&feature=\
search_result
<https://market.android.com/details?id=com.w2cyk.android.rfinder&feature\
=search_result>

Description:

RFinder allows you to find repeaters all over the world based on your current location or a specified location. It allows sorting by distance or by Trustee callsign as well as filtering by band and radius in miles or kilometers.

25% of the proceeds of this app funds youth programs in Amateur Radio!

Repeater Finder (RFinder) taps into a worldwide repeater database, including IRLP and Echolink information. Our database is growing daily.

Do keep us updated--this is a welcomed sort of app, and if it's worth the five bucks, do let us know :3

(With this, I think the one thing Android is still missing on the ham apps front is a digital-modes app for PSK and the like (still haven't found an Android equivalent to PocketDigi yet...), which is pretty darn impressive if you ask me :D)

http://market.android.com/details?id=hunt.morseDit

This is an excellent application for learning Morse Code. This is not a new app, but it has been recently updated to include audio--which is kind of important when learning code. The best feature is the customizable training mode which allows you to select the characters you are learning for a custom quiz.

165. Seeking Satellitle Tracker

Yahoo group: droidhams
Date: 2011-04-10 15:53:44 UTC
From: Jeffrey
Topic: 165 Message: 165

Hey All,
Anyone of you into tracking satellites? I have been running an APRS station here for years and tracking basic satellites but now starting to have an interest in work the ISS via APRS or even voice. I have downloaded Heaven Above, Droid Sat, and Space Junk. I am looking for a app that will do something like rectangular or 3D projections. Sorta like Orbitron does. However, everything I see out there on the Market isn't anything like this. So, figured I would ask you since your all HAM's and I am sure their are some of you who know what I am searching for and in the need for.
So, what app is like this on the android market or can put into my droid to make it work for ISS tracking.

Jeffrey

170. U2APRS app

Yahoo group: droidhams
Date: 2011-04-12 20:04:28 UTC
From: pvngsfire
Topic: 170 Message: 170

I have been running U2APRS for a while now and have really enjoyed this app, but have a question for the group. When sending a beacon from my droid I can see it on my UI-View, but when I'm in my mobile monitoring via Kenwood D700 with Geo Sat 5, i don't see it when it beacons or when any other time. Is there some thing that needs to be changed or added to allow it to be seen?

Thanks.
Jay

Hi Jay,
Probably the problem is that there are no igates in your area gating the internet to RF.
So therefore you will not see any beacons that U2APRS is gating to the internet on your D710.
Cheers,
Robin ZL3REW

From: NE1B.C6AWB
Topic: 170 Message: 172

Probably correct...but, in my area there are also few I-GATES that gate INTERNET to RF. However, eventually, my MESSAGES from the DROID and U2APRS reach my D710 and vice versa via I-GATES and DIGIs. The real issue is whether the local I-GATE beacons your SSID.

On my I-GATE running UI-VIEW, under the SETUP> INCLUDE/EXCLUDE Menu there are many choices, including:

-Exclude Mobile Stations
-Exclude Callsigns list
-Exclude Object Names
-Exclude by traffic type
-Exclude internet traffic
-Exclude stations more than 5 or "x" miles away

Perhaps you are outside the radius of "x" miles from the nearest I-GATE. Have a chat with your local I-GATE sysops to see if they will "allow" your beaconing from the INTERNET to RF.

Bill, NE1B

Steve,

How much memory does your device have? If the android OS notices a shortage of memory, it automatically kills background jobs.

Steve,

Thanks for the reply. Seems to me that 160MB is large enough to run U2APRS in background. Now, I have no idea why your Droid 1 kills U2APRS. I am using Sony Ericsson Xperia, which allows it to run background without problems.

Dick, my friend Dave, W7AQK and I (both with Droid X phones) have tried connecting direct using the echolink app and it never works. We have no problem talking with each other when we both connect to a 3rd (non smart phone) echolink node. So I'm guessing what you describe is normal operation.

I suspect you can't connect directly because of some type of firewall issue with the wireless network provider. Echolink suggests connecting via a proxy (http://www.echolink.org/proxy.htm). Have you tried this?

Disclaimer: I haven't tried the Echolink Android app and don't know if it supports using a proxy.

Replying to my own post, here... the answer is on echolink's android FAQ page (http://www.echolink.org/faq_android.htm <http://www.echolink.org/faq_android.htm>):
Are there any special limitations of the Relay networking option?
Yes. Although Relay is the default, and will generally give the best performance, the following limitations currently apply:

* You can initiate a connection, but you cannot receive one; stations that try to connect to you will receive a "No route available" error message. This means that Android or iPhone users that are using the Relay mode cannot connect to each other.
* Because there are only a small number of relay severs, you often cannot connect to the same conference or conference server that another node using the Relay mode is already connected to. This means that two Android or iPhone users that are using the Relay mode often cannot join the same conference at the same time.

So the answer is to switch to Public Proxy mode and try that.

New to this Group, and new to APRS

I volunteer as a motorcycle marshal/SAG/Ham for charity bicycle events. More and more of these events are utilizing APRS to allow net control to track motos & SAGs.

I am due for my new-every-two upgrade with VZW and am considering a 4G Droid to replace my Storm. If I am following the postings correctly, I can mount my Droid on my moto, and would be able to see what net control sees (i.e., where the motos & SAGs are on the course) via a Droid APRS app.

Am I on the right track?

The app "U2APRS" offers an aprs.fi view of all other APRS mobiles, portables and fixed stations around your location. Google it for more information and screen displays. That should be very useful for mobile and fixed incident command centers. Of course, that means all units must be received by a digipeater or I-Gate or 3G cell site to get into the APRS Server network. This does not provide a simplex VHF "off net" display that would be more useful for SAR work in remote areas. You must be in a 3G coverage area.

Topic: 194 Message: 194

Is there an application that can read an ADIF log (exported from your favourite logging program or LotW) that will allow basic search by call, entity/grid/band lookup, give various totals (DXCC, grids, WAS...).
Currently the only way I've found to do this other than login to LotW via the browser is to export your log into a csv file and use a spreadsheet - crude and ineffective given the variable number of fields that may be populated/present in the ADIF record.
NOT asking for a logging program and ensuing the religious discussions on contesting v. general logging, mobile voice recognition, etc.

73, George VE3YV / K8HI

Yeah which is about what you'll pay for a similar app on the iPhone. There's no requirement that says all Android apps have to be free. I've tested this during my 15 minute trial period and it works pretty well.

When operating portable its desirable to keep your go-bag compact. Since you're already going to bring your phone it means you won't need to bring a laptop or netbook which adds more weight and takes up more space. Also remember Android isn't limited to just phones as there is a growing tablet market including, but not limited to the Motorolla Xoom and Asus Transformer which have bigger screens then phones and longer battery life then netbooks. Also as of Android 3.1 USB support was added to the Android SDK so cat control wouldn't be that far off especially when Android 4 is released later this year bringing Android 3 funtionality to phones.

I've had this for a week and it works very well. The $5 is a minor cost compared to my Droid X, FT-857, and the netbook with HRD. We hams have waited over 2 years for any PSK program. Just a few months ago we got operational APRS for android. I use U2APRS. As to how it works...great waterfall, fast lock and start of decoding, no external interface needed and plenty of macros to reply with. I set the phone in the car dock just over the built in speaker of the FT-857. To reply I first click the menu key, press the PTT on my hand mic and hold it near the phone. Then press "Transmit " on the phone. No VOX needed. I can see this becoming part of a "pocket HF radio" setup.
Also, support both with purchase and constructive feedback from users might get us DroidHams more features than even iOS or WinMobile phone/tablet owners. Applies to this and other ham radio related programs.

Hi Martin,
Sounds like your about the same age as me lol.

Have a look here in the files section.

http://groups.yahoo.com/group/u2aprs/

You will probably have to join to access it.
These are the only 2 I could find after looking around the interweb.

If this fails I can email it to you.
When I first installed u2aprs I just put it on my card in the phone and
clicked on it and it installed itself.

Cheers,
Robin.

214. APRSDroid

Yahoo group: droidhams
Date: 2011-08-25 09:29:57 UTC
From: ke4dzu@bellsouth.net
Topic: 214 Message: 214

Hi to the group, I'm new at using APRSDroid. My new Atrix wouldn't allow me to open the U2APRS files and I don't want to compromise my warrenty by "rooting" it.
Now back to APRSDroid, when I start the program it does not center me on my current position and I have to scroll the map view to my location. Saturday I had the program on in Huntsville, Al at the hamfest, and when I started the program yesterday in my home area, B'ham, Al, it was still showing the Huntsville area. Is there a setting to "track me" or relocate after I send a beacon?
Thanks for any help, Mike KE4DZU

From: tomgyro
Topic: 215 Message: 215

For those not too cheap to support real work for an improved phone based PSK program the Android Market Droid PSK program has just been updated.

Just a few of the improvements are the front screen transmit button; tap,copy and paste logbook entry; simplified macros with easy editing; and a manual only two taps away from the main screen in case you forgot how to use the many functions.

Our support of such a program that although not free is less than a cup of good coffee should show other software writers that it is worth their time to write for android owning hams. And will keep the updates for this program coming.

For the rest of you go eat your apples.

Hi Tom and Android would be programmers,

I am personaly not bothered about PSK31 (and I'm sure many others are not either), but I would gladly pay a price for something more useful, such as a decent terminal program for an android tablet that can talk to a TNC via bluetooth or even better to a PACTOR MODEM such as the PTC-II series.
Of course best of all would be an implementation of Airmail2000 (a client for Winlink2000 Amateur Radio e-mail system) for android devices.

The USB port on most Android devices is for data transfer. Other USB support isnt available. Its not a general purpose USB port as you would find on PC or Mac. Some support is availble for 3G dongles but thats about it.

Well that actually not completly true... Your Android Phone is running a Linux OS, so if you have the right software you can use it the USB for almost anything. The USB is capable of acting as a USB-Host just like your PC does.

Here are two examples where a keyboard is connected to the phone:
http://www.youtube.com/watch?v=3-bLOc1qnMM
http://www.youtube.com/watch?v=7Bsl04k2Ci4

But in fact I have found nothing about using an external USB-Soundcard with Android. (only that it could work http://forum.xda-developers.com/showthread.php?t=867274)

This is also not entirely true. USB has two modes, well actually three
sort of. There are USB hosts, USB peripherals, and a sort of mix called
"USB On The Go".

Hosts can talk to peripherals, but peripherals cannot talk to other
peripherals, with the exception of peripherals that can enter USB on the go
mode.

The USB controller in your PC is designed to act as a USB host. The USB
controller in your tablet is designed to act as a peripheral. This is how
they normally communicate, where you plug in the tablet and your computer
sees the storage as a disk device, etc.

Some USB chipsets can be switched from peripheral mode to host mode, but
this is not just a matter of changing some settings or loading a driver.
The chipset built into the device must support it. The first thing to
determine is whether the chipset in your particular tablet can even support
host mode, without this there is no hope.

Assuming your hardware can act as a host, you still need some tool to
trigger the chipset into host mode. This usually means somebody has to
write some software that talks directly to the usb hardware and
reconfigures it. This would be the second thing to look into.. if my
tablet has hardware that can do host mode, has somebody actually gotten
said hardware to enter host mode and how.

Assuming you get your hardware into host mode, you now just need kernel modules for the usb controller and the usb audio device. There can probably be built without too much trouble by anyone familiar with cross compiling kernel modules, or if you're really really lucky maybe somebody has already made a module that matches the cpu/kernel version on your tablet. I wouldn't count on it though.

Now... you've got a usb controller that can do host mode.. you've put it in host mode, you've located/created the modules and loaded them, plugged in your usb device and it's recognized.. how do you get an android app to use this device instead of the built in sound hardware? This part I have no idea about, but it might be possible to configure this somewhere.. you'd have to look into that. I wouldn't be amazed if its possible, but I also would not be amazed if its not possible at all, or requires rebuilding some parts of the OS itself. No idea.

The other wrinkle here is USB On The Go mode. This is a way to allow things that are normally peripherals to also be a limited sort of host to which you can attach certain types of peripherals. I think this may be how tablets with attached keyboards usually work, as keyboards are one of the supported devices in otg mode. Although the USB OTG FAQ mentions several times that only certain types of peripherals are supported, if there is a simple list of exactly which those are somewhere, I haven't seen it. Wikipedia mentions storage and human input.. no sound. Don't know this means there is no audio device support in OTG mode, but if so that's bad news since OTG mode is probably a lot more common than full host mode.

So.. to the original question, is there an APP to do this (why app capitalized? your guess as good as mine): No, while it might be possible, it's way more complicated than installing an app.

222. Re: USB Sound card porting driver APP?

http://developer.android.com/sdk/android-3.1-highlights.html

As of Android 3.1 your device has USB Host support. Many tablets are already running either 3.1 or the newer 3.2. What matters in this situation is drivers or the lack there of to be more precise. I do not believe the existing sound drivers in Android would support a USB sound card device. If they did it would require additional coding for it to support 2 sound devices at the same time would be my second guess.

From your link:

"The platform’s USB capabilities rely on components in device hardware, so
support for USB on specific devices may vary and is determined by device
manufacturers."

This is exactly what I was explaining in my first post. Your tablet may or
may not be able to enter host mode. This has nothing to do with what
version of an operating system is installed, or anything to do with any
other software on the device. The USB chipset itself may simply not
support host mode (it's been a while since I messed around with this type
of thing, but chipsets only capable of peripheral mode were quite common in
PDAs and windows mobile era smartphones), and if this is the case, you
will not be able to use host mode no matter what software you install.

Topic: 218 Message: 224

There are Bluetooth apps to port the sound over using USB to another Bluetooth device. So it shouldn't be too difficult to drive a USB Soundcard and port the sound data back and fwd to it, it just hasn't yet been done, because someone hasn't asked for it prehaps?

228. anyone used a Toshiba Thrive tablet with a Tigertronics SL1-USB?

Yahoo group: droidhams
Date: 2012-02-07 23:24:56 UTC
From: wn1z.orrin
Topic: 228 Message: 228

I know this relates to some posts late in 2011, but i'm making my query more specific:

Has anyone used a Toshiba Thrive tablet (or other tablet having a USB port) with the Tigertronics SL1-USB interface for PSK-31?

My tablet has Android 3.2. The DroidPSK app is 2.11.

Basically i suppose the question is: can the DroidPSK app control an external soundcard interface thru the usb port.

I am also asking this question on wolphi.com the author of DroidPSK.

(A side note: i apparently am able to use the tablet with the non-USB version of the Tigertronics SL-1+ interface with an adaptor cable that splits the audio/mic jack of the tablet into audio-out and mic. No contacts yet but that is the next step. I do note that the tablet is apparently unable to set off the Vox in the interface, so i use the radio's Vox to do that job.)

de WN1Z Orrin

best 5 bucks i have ever spent....except for that time when i bought that lottery ticket..:)
It works good, i like it.

--- In droidhams@yahoogroups.com, "tomgyro" <tomgyro@...> wrote:
>
> I've had this for a week and it works very well. The $5 is a minor cost compared to my Droid X, FT-857, and the netbook with HRD. We hams have waited over 2 years for any PSK program. Just a few months ago we got operational APRS for android. I use U2APRS. As to how it works...great waterfall, fast lock and start of decoding, no external interface needed and plenty of macros to reply with. I set the phone in the car dock just over the built in speaker of the FT-857. To reply I first click the menu key, press the PTT on my hand mic and hold it near the phone. Then press "Transmit " on the phone. No VOX needed. I can see this becoming part of a "pocket HF radio" setup.
> Also, support both with purchase and constructive feedback from users might get us DroidHams more features than even iOS or WinMobile phone/tablet owners. Applies to this and other ham radio related programs.

Mike,

Most of them are available in the Android Market.

Topic: 195 Message: 233

$5 seems like a pittance for a good program. The reason PSK31 doesn't "control your radio" is not the fault of the software. Many Android devices don't have an output port other than headphones.

If someone has a Motorola Zoom or Acer 500 then it is possible to hardwire them to the radio. Although it is not documented the headphone jack is also a mike jack. So audio in/out can be found at this jack and wired to the radio. Still no PTT, but VOX can be used.

Also I understand DroidPsk now supports bluetooth. So with a bluetooth adapter wired into the radio you can control the radio via the Android Phone. Bluetooth 30 feet. You'll have to google for the adapter, but they are around. Or if you are experienced in electronics you can wire a bluetooth wireless headset into the mike/headphones of the radio. Mike have to adjust levels and impedence.

Well I'm not so sure about Android 3.x and up. Raspberry Pi uses an ARM11 cpu which is based off the ARMv6 architecture. I believe 3.x and up dropped support of ARMv6 in favor of ARMv7 and newer which is what most mainstream Android devices have been using for the past year or two. Of course that doesn't mean folks won't try to port it after all I've seen folks port 3.0 to the original G1.

Per http://www.aprs-is.net/Connecting.aspx (emphasis theirs):

> passcode is the computed passcode for your callsign. -1 is used for
> receive-only. *It is the responsibility of each software author to
> provide the proper passcode to their individual users.*

If the author is non-responsive, I'd think twice about using a
non-supported APRS client.

Per http://www.aprs-is.net/Connecting.aspx:

> passcode is the computed passcode for your callsign. -1 is used for
> receive-only. *It is the responsibility of each software author to
> provide the proper passcode to their individual users.* This is to aid
> in keeping APRS-IS restricted to amateur radio use only.

Note that last sentence (omitted in my previous quote), so please don't
publish any non-vetted method of getting an APRS-IS server passcode.

That said, if you use any other APRS-IS client, the same APRS-IS
passcode is likely to work with another APRS-IS client using the same
base callsign (-SSID independent).

From: Michael
Topic: 241 Message: 241

Greetings All,

Can the beacon icon be changed from a "phone" to a "car", "truck", motorcycle", etc.?
Anything but that ridiculous "phone" icon.

Thanks

From: Jeremy Sibert
Topic: 241 Message: 244

Absolutely. Google APRS symbol table, you will find the table of all the different icons, from there just go into Preferences and under Position Reports the first option is APRS symbol. Mine is /$ which is the phone, if you want a car, it would be /(and a truck would be /k

The link for the link for the symbols page is http://wa8lmf.net/aprs/APRS_symbols.html

Good luck.

Yahoo group: droidhams
Date: 2012-11-18 11:50:49 UTC
From: n2thepowerofn
Topic: 247 Message: 247

hi, first post here for me. i wondered if there are any developers here? i use a app called pocketdigi on win mobile (pda, and my phone) and its open source (sourceforge) it runs on even old slow hardware from years ago! this needs compiling on android platform. it handles most digi modes flawlessly. i saw the apps on droid for psk, etc but it must be just a revenue generator to need a seperate app for each mode.
i tried andpskmail (not on android market) and it has lots of modes but the modem is integrated to only be used as the pskmail system. (also open source) so there we are....the stuff it there on sourceforge for a good guy to compile and release.

Unfortunately, this is not nearly so simple as you seem to believe.
Code written for Windows Mobile is not something that can just be "compiled" and used on Android. In fact it's debatable whether code written for win mobile would be of any use at all to someone creating an Android application. If anything, it might serve as a vague example of how to implement a handful of the hundreds or thousands of functions needed to implement a similar program.

The author of a typical app puts dozens if not hundreds of hours of work into it. It is not unreasonable to give them a few dollars for their efforts. Sure beats doing all that work yourself.

Plus, haven't I read someplace that some Androids, such as my HTC, are
LINUX based, so a Windows compiled program may not work anyways.

All Android phones are linux based. The Android OS is an embedded version of linux developed by Google. Nothing written purely WinMo based will be able to run on Android without extensive re-writing.

From: n2thepowerofn
Topic: 247 Message: 251

well pocketdigi was in fact based on source code for linux. maybe we must wait untill someone compiles fldigi for android. im currently writing this on a olimex a13 ARM dev board that can run linux (im running debian) or android. under debian fldigi works well and so does qsstv. i think compiling fldigi would be a pain at the moment because of all the dependancies and libraries that would also need compiling.
if only i could compile apt-get or synaptic to run on droid, then the rest would be automatic.

Hey all,

I've just been updating my DroidHam list https://sites.google.com/site/actionman5/projects/android-google/ar-apps of apps to add in links and sorting of categories etc.

Please let me know if you are aware of any other good apps. mailto:spooktech@... http://www.spooktech.net

Please disregard my last message. I found it listed only as Repeater rather than RepeaterBook.

However, I did not see https://play.google.com/store/apps/details?id=com.amaslyuk.gt

Hello Lloyd,

They're actually different. The One I had listed is a global database, where as RepeaterBook is only North/South America (useless to me and others outside American continents).

I've added RepeaterBook now.
